

# International School Summer School on Metrology 2015

24–28 August 2015

**Metrology** –  
the science of correct  
measurement – is an essential  
cornerstone of our industrialized society.  
Given the prevailing economic and social  
challenges we are faced with, the role and the further  
development of metrology is therefore of extraordinary  
importance for progress in technology and science.

The week-long summer school is specifically designed to give PhD students engaged in natural sciences and engineering research the opportunity to

- ◊ get to know metrological core concepts
- ◊ gain insights into contemporary metrological issues, in particular the redefinition of units and their practical application
- ◊ participate in a practical course on the estimation of measurement uncertainties
- ◊ network with key experts in metrology
- ◊ develop and practice professional skills in communication and engagement.
